

Notes--Limits Approaching ∞ or $-\infty$

Review Finding horizontal asymptotes...

$$f(x) = \frac{ax^n + \dots}{bx^m + \dots} \quad \leftarrow \begin{array}{l} \text{nth degree polynomial} \\ \text{mth degree polynomial} \end{array}$$

1 If $n < m$, then the x-axis is the horizontal asymptote. $y = 0$

2 If $n = m$, then the horizontal asymptote is the line
 $y = \frac{a}{b}$

3 If $n > m$, then there is no horizontal asymptote. (There is a slant diagonal or oblique asymptote.)

Example 1 Find each limit.

1. $\lim_{x \rightarrow \infty} \left(\frac{x^2 + 1}{x^3 + 2x} \right) = 0$

2. $\lim_{x \rightarrow -\infty} \left(\frac{3x + 1}{x^2} \right) = 0$

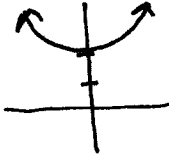

3. $\lim_{x \rightarrow \infty} \left(\frac{5x^2 + 2x - 3}{9x^2 + x + 4} \right) = \frac{5}{9}$

4. $\lim_{x \rightarrow \infty} \left(\frac{4x^2 + 1}{2x} \right) = \text{DNE}, \infty$

5. $\lim_{x \rightarrow -\infty} \left(\frac{4x^2 + 1}{2x} \right) = \text{DNE}, -\infty$

$$6. \lim_{x \rightarrow \infty} \frac{(2x+1)(x-7)}{(3x-2)(4x+1)} = \lim_{x \rightarrow \infty} \frac{2x^2 - 13x - 7}{12x^2 - 5x - 2} = \frac{2}{12} = \frac{1}{6}$$

$$7. \lim_{x \rightarrow \infty} (2+x^2) = \text{DNE}, \infty$$

$$8. \lim_{x \rightarrow \infty} \left(\frac{7}{x^2} + 5 \right) = 0 + 5 = 5$$

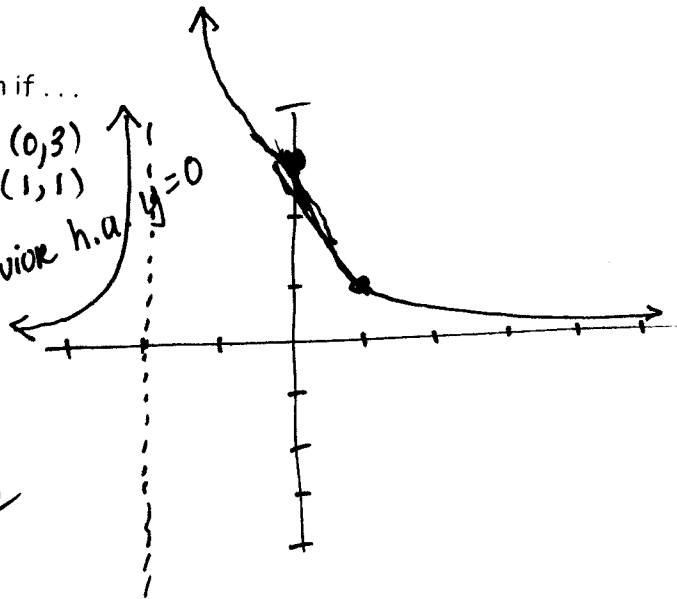

Example 2 Draw a function if ...

$$f(0) = 3 \quad \left. \begin{array}{l} f(0) = 3 \\ f(1) = 1 \end{array} \right\} \text{points } (0,3) \\ (1,1)$$

$$\lim_{x \rightarrow \infty} f(x) = 0 \quad \left. \begin{array}{l} \lim_{x \rightarrow \infty} f(x) = 0 \\ \lim_{x \rightarrow -\infty} f(x) = 0 \end{array} \right\} \text{end behavior h.a. } y=0$$

$$\lim_{x \rightarrow -2^+} f(x) = \infty$$

$$\lim_{x \rightarrow -2^-} f(x) = \infty \quad \left. \begin{array}{l} \lim_{x \rightarrow -2^+} f(x) = \infty \\ \lim_{x \rightarrow -2^-} f(x) = \infty \end{array} \right\} \text{v.a. at } x=-2$$

$$f(0) = 0 \quad \text{pt. } (0,0)$$

there is a removable discontinuity at $x = 4$

$$\lim_{x \rightarrow \infty} f(x) = 1$$

$$\lim_{x \rightarrow -\infty} f(x) = -1 \quad \left. \begin{array}{l} \lim_{x \rightarrow \infty} f(x) = 1 \\ \lim_{x \rightarrow -\infty} f(x) = -1 \end{array} \right\} \text{end behavior h.a. } y=1, y=-1$$

$$\lim_{x \rightarrow 4} f(x) = 2$$

$$\lim_{x \rightarrow -3} f(x) = \text{does not exist}$$
